SENTINEL®

ALWAYS LEADING

Legacy WAN Issues?

Legacy WAN architectures are facing major challenges under this evolving landscape. Sentinel's SD-WAN Readiness Workshop helps you.

As your organization's network continues to evolve, Sentinel's SD-WAN Readiness Workshop can help you overcome legacy WAN issues by increasing bandwidth at lower costs, centralizing management, providing full visibility into your network, and boosting security.

Workshop Overview

- Aligns business needs with the technology superiority of SD-WAN technologies
- Prioritize advanced SD-WAN capabilities and investments to match business outcomes
- Identify application-based intelligence needs that improve your users experience in the office, at home and mobile
- Outcome based recommendations assure the success of your SD-WAN investments
- Validate internet service provider SLAs with key application performance metrics

Benefits

- Modernize and digitally transform your traditional WAN
- Optimize Saas and IaaS-based routing to improve network traffic flow and efficiency
- Evaluate your ROI by comparing MPLS against low-cost broadband transports
- Leverage unified network and policy management with deployment flexibility
- Centralized control and "one touch" updates enterprise wide
