Connect and Compute Anywhere

THE SENTINEL DIFFERENCE

CONNECT & COMPUTE ANYWHERE
- Premises, cloud or Sentinel hosted high capacity and performance VPN services
- Public cloud virtual desktop services deployed in days to a few weeks
- Consistent application experiences on nearly any device, anywhere
- Stay secure while mobile with 24x7x365 Sentinel SOC monitoring options

COLLABORATE WITH EVERYONE
- Complementary to Compute Anywhere, ask Sentinel about our Collaborate with Everyone offerings and COVID-19 bundles
- Sentinel bundles include rapidly deployed advanced collaboration with extended trials on WebEx and Microsoft Teams platforms

COMPUTE ANYWHERE SECURELY
- Add a Managed Detection and Response (MDR) endpoint protection to Compute Anywhere solutions to protect your productivity on the road or at home
- Sentinel also offers cloud security including content filtering, malware and botnet protection all available for your Compute Anywhere experience
- Stay connected and productive anywhere and know that Sentinel's SOC is on-guard 24x7x365 with Sentinel MDR services

ALWAYS KNOWLEDGEABLE

WHO WE ARE
Sentinel Technologies has been delivering high quality IT services, products, and support solutions since 1982. We can help your business obtain the tools for success through our partnerships with global technology solutions leaders including AWS, Cisco, Cylance, Dell, Microsoft, ServiceNow, Splunk, VMware and more.

Connect and Compute Anywhere

During a crisis, it is important that all workers have the ability to immediately access critical applications from anywhere. Your current capabilities may only require an expansion of capacity for internet and VPN, or your situation might be more complicated and require services such as emergency virtual desktops. If your organization doesn't have a mobile workforce plan, company-issued laptops, and regular mobility testing for all workers, you may encounter challenges when working remotely. Sentinel wants to help ensure your employees can connect and compute quickly and securely from anywhere during critical situations.

CONNECT ANYWHERE WITH CONFIDENCE

When your workforce is mobile or suddenly thrust into a situation where working remotely is required, it is critical that secure connectivity is easily available. Sentinel features a range of solutions, from cloud-based VPN services to rapidly deployable virtual instances of VPN services, to create new secure connections or augment/expand existing ones. Sentinel partners with industry-leading vendors to offer many options to help our customers connect and scale out fast. Whether you are connecting to your own data centers, Sentinel CloudSelect, or public cloud services, Sentinel has a solution for you and can deliver express secure connectivity.

Sentinel has also worked with our partners on programs such as Cisco's AnyConnect for COVID-19 as well as Palo Alto's GlobalProtect and Prisma Access with accelerated deployment and onboarding services.

VIRTUAL DESKTOP SERVICES ON ANY DEVICE

There are many ways users productively compute. The most traditional is the corporate imaged "PC", but those aren't always assigned to specific employees or have mobile capabilities. Special purpose compute devices such as medical carts also require extra services and access unique applications such as EMR and imaging systems. The challenge is making those specific types of devices, services, and applications available to medical professionals and others who may be working in a remote capacity.

Sentinel has the proven ability to assist customers with mobile devices and imaging as well as delivering on demand, public cloud-based virtual desktop services from our partners at Amazon and Microsoft. Traditional VDI solutions require large hardware purchases, long design cycles, and on-site installation, which can take months or years in addition to being quite costly. Sentinel's cloud compute now services connect you with an architect to engineer a solution for your network and users. We have quick turnaround plans able to deliver compute on demand (VDI) services in a few weeks or less. These proof of concept services for cloud virtual compute can support nearly every device your users have, and includes trial periods of up to 90 days.

HOW SENTINEL CAN HELP

Sentinel stands ready to work with your team to define a fast path to compute for your organization in alignment with network architecture, security standards, desktop images, and applications. Our Enterprise Architecture & Innovation team can also create a custom-built workshop for your organization to uncover any gaps, help you establish priorities, connect you with subject matter experts, and provide your organization with practical solutions and services designed to satisfy any immediate and ongoing compute demands.
